

In this project I have created

API Gateway

Payment service port 8083

Booking service port 8081

Just run as java / Spring boot application with configuring the eureka server port 8761

I have used the h2 database

And eclipse Ide in intelli j its not showing the run options from my side

I hope this information is enough

PROCESS :

I have created a folder name Sweet home then start the spring initializr name booking service provided the group id com.upgrad added the dependencies and extracted to the folder sweet home then created the entities then the controller layer/dao layer/service layer/and the model layer wrote the codes and did the same thing for the payment service as well

Eureka

Added the dependency then started the eureka server then also added the eureka client to the booking as well as the payment service checked the status checked whether it show or not then last ly added the API Gateway into the mix (Optional)
